

Roman Nalapko

Python AI Engineer | Backend Developer | LLM Applications

Ukraine · Remote

· linkedin.com/in/roman-nalapko-aa70b9327 · github.com/roman-nalapko

SUMMARY

Python developer focused on building AI-powered backend systems, automation workflows and LLM applications. Experienced with production-oriented RAG systems, async APIs, vector databases, AI automation pipelines and LLM integrations. Building scalable AI applications using Python, FastAPI, PostgreSQL, Docker and modern AI infrastructure.

TECHNICAL SKILLS

Languages: Python, SQL

Backend: FastAPI, asyncio, REST APIs, SQLAlchemy, Pydantic

AI / LLM: RAG, LLM Applications, Embeddings, Semantic Search, Prompt Engineering, OpenAI-compatible APIs, Claude API, LM Studio, Ollama, Whisper

Databases: PostgreSQL, MySQL, Qdrant, ChromaDB

Automation: n8n, Make.com, Telegram Bot API, Webhooks

Infrastructure: Docker, Docker Compose, Linux, GitHub Actions

Data Processing: pandas, BeautifulSoup, Playwright, aiohttp

EXPERIENCE

Python Developer | AI Automation & LLM Projects

Freelance · Mar 2023 - Present · Remote

- Built AI-powered backend applications and automation workflows using Python.
- Developed RAG systems with FastAPI, PostgreSQL, Qdrant and local LLM infrastructure.
- Created Telegram AI assistants using async Python and LLM integrations.
- Built automation pipelines with n8n, APIs and webhook-based architectures.
- Developed data processing and scraping pipelines.
- Created Docker-based deployments for AI applications.

Stack: Python, FastAPI, PostgreSQL, Docker, asyncio, LLM APIs

PROJECTS

AI RAG Platform

Production-oriented document intelligence backend. GitHub: github.com/roman-nalapko/ai-rag-platform

Stack: Python, FastAPI, PostgreSQL, Qdrant, SQLAlchemy, Docker, LM Studio

- Async FastAPI backend, multi-tenant knowledge bases and document ingestion pipeline.
- Vector search with Qdrant, streaming AI chat, conversation memory and structured logging.
- RAG evaluation pipeline, Docker deployment and CI/CD.

AI FAQ Assistant

Telegram AI assistant connected to private knowledge base. Stack: Python, aiogram, Local LLM, RAG

- Built async Telegram interface.
- Integrated LLM-based question answering.
- Automated repetitive support workflows.

AI Content Automation Pipeline

Stack: n8n, Python, OpenAI API, Webhooks

- Created AI-powered workflow automation.
- Integrated APIs and automated content processing.
- Added retry and error handling logic.

EDUCATION

Danube Professional College of National University "Odessa Maritime Academy"

Junior Bachelor, Navigation and Ship Handling · 2023 - 2027

CERTIFICATIONS

IBM - Linux Commands & Shell Scripting · Coursera - Technical Certifications
